Marek Duciuc

I put AI into e-commerce and logistics operations – in daily use by the team, measured against KPIs.

Open to new contracts

Full-time contracts in EMEA, remote or hybrid. One-day AI workshops for operations teams. Based in Ostrava, Czechia (CET).

Summary

Since 2026 I have been on a contract as an integration engineer, building AI assistants for service desk tickets and Power Automate integrations – with human checkpoints and production out of reach. Before that I ran the fulfilment centre of an e-shop with a team of about 40 people and built the AI tools the operation used every day: stock tracking, a central event store and a supplier sourcing agent.

Before that: 10+ years in backend development, search infrastructure and technical support – Elastic, Opster, Conrad Electronic, Trask. I enjoy making systems measurable before optimising them.

Case studies

AI in the daily operations of an e-commerce fulfilment centre – https://marekduciuc.github.io/case-studies/doocan.html

Disciplined agentic development: from requirement to pull request – https://marekduciuc.github.io/case-studies/tdd-flow.html

An AI assistant for support tickets and integrations, safe by design – https://marekduciuc.github.io/case-studies/support-automation.html

Experience

2026–
2026 – present

Integration Engineer, AI automation

Software company (name not disclosed), contract

Service desk tickets and integrations between business systems: Power Automate, Zendesk, Monday.com and Jira.

- Built a Claude Code ticket workspace: memory per ticket, focus mode, knowledge base, and an allow-listed gateway to the service desk API that can only read, add private notes and create confirmed tickets
- Built a Power Automate specialist: analysis challenged by a critic agent, build with a review loop against the request, deployment to the development environment only, documentation checked against each flow
- Human checkpoints for analysis, failed builds and every deployment; production stays read-only for the AI
- A review loop in which the tools propose improvements to themselves; 8 of 10 accepted after review

2025–26
Oct 2025 – Apr 2026

Head of Fulfilment Operations

Doocan.com, Ostrava, full-time

Management of the day-to-day operations of an e-shop fulfilment centre.

- Led a team of approx. 40 workers; personal development of subordinate managers and workers
- Managed and developed supplier relationships; logistics support of the strategic expansion to Germany
- Monitored delivery KPIs; implemented mechanisms to increase order fulfilment precision; implemented a WMS

Technology and automation

- Built an internal stock-tracking add-on for Google Sheets in Google Apps Script and Claude Code – in daily production use, monitoring inventory levels and triggering

Process and warehouse optimisation

- Improved the in-house picking application step by step: distinct audio feedback for correct and incorrect scans, warehouse location support

timely replenishment from the external warehouse
- Introduced OpenSearch as a central event store processing tens of thousands of events daily – orders, goods movements, sales, picker walking distance, packaging consumption and external data
- Identified a correlation between weather and brick-and-mortar footfall and used it as an input for stock planning
- Automated supplier sourcing with Claude Code – the agent identified qualifying vendors and issued RFQs against my parameters
- Trained a team of ~10 colleagues in the effective use of Claude Cowork

Main successes

- 2-layer warehouse structure with an external overflow site
- Negotiations with shipping providers that saved CZK 500,000 per year
- 99+% order fulfilment precision
- Modernisation of warehouse equipment
- Optimised goods placement with an ABC analysis based on sales volume, cutting picker walking distance per order
- Redesigned inbound packaging logistics, freeing significant storage capacity in the main warehouse
- Rebuilt the packing stations by hand into purpose-built workstations

2022–25
Dec 2022 – Aug 2025

Java Developer

Conrad Electronic Group, Ostrava, full-time

- Maintenance and development of an Elasticsearch-based search backend in Java: campaign validation, data sets for POCs, data normalisation, bug fixing
- Maintenance and development of a Java backend for a B2B OCI-compliant web shop: Grafana metrics and traces, GCP Datastore, GitLab pipelines, SonarQube

Spring Boot, Spring Web, Spring Data, microservices, Docker, Kubernetes, GitLab pipelines, REST APIs, Maven, Mockito, JUnit

2022
Apr – Nov

Elasticsearch Engineer

Trask, full-time contract

Central log management solution for a Czech bank (name under NDA).

- Elasticsearch management and administration; ingest pipelines with Beats and Logstash
- Dashboards and visualisations; role-based access mapped to Active Directory groups
- Kibana training for internal and external users, focused on the Analytics module

2022
Jan – Mar

Elasticsearch Engineer

Real-digital.de, full-time contract

- Reindexing reduced from 3 days to a few hours
- Indexing throughput raised from 20 to nearly 1,800 operations per second with bulk indexing
- Search latency reduced by 20%
- Automated performance test with Rally to set a baseline and measure every optimisation stage

2021
Jul – Nov

Senior Support Engineer

Opster, full-time remote contract

Consulting on performance and stability: deployment sizing, mapping and sharding optimisation, hot-warm architecture, ILM-based data purge, SLM. Customers achieved significant operational cost reductions.

2018–21
Jun 2018 – Jun 2021

Support Engineer II

Elastic, full-time remote contract

Technical support for Elastic customers and prospects across the whole ELK stack, including live production-downtime incidents. Proposed product improvements that were later implemented.

2017–18
Sep 2017 – May 2018

Java Software Engineer

Tieto, full-time

Web application for vehicle technical inspection for the Finnish government (Java, Spring, JPA, Hibernate, AngularJS, MySQL). Led the adoption of Agile principles on the project.

Skills

AI

Claude Code, Claude Cowork, agentic workflows and automation, LLM integration, AI-assisted development, internal AI enablement and training

Operations

Team leading (up to 40 people), KPI monitoring, WMS implementation, ABC analysis, procurement, negotiation, operational analytics

Search

Elasticsearch and OpenSearch: mapping, ILM/SLM, sharding, query optimisation, hot-warm architecture, sizing, Kibana, Logstash, Beats, security, Rally

Backend

Java, Spring Boot, JPA/Hibernate, Vaadin, REST APIs, microservices, Maven, JUnit, Mockito

DevOps and tools

Docker, Kubernetes, GitLab pipelines, Ansible, SonarQube, Grafana, GCP Datastore, Google Apps Script, Jira, Confluence

Languages

Czech

Native

English

C1

Polish

A2, passive

Education

Mgr. (M.Sc.) in Information Technology

University of Ostrava, 2003 – 2007

Certifications

ISTQB Foundation, Certified ScrumMaster
